

ALLURE BEAUTY SPA CODE by Jeniffer Vasquez & Joceline Garcia

1. Lines 28-52 on the index.html file are the header class portion. This class was created to place the background image, and input the name of the business, along with a brief introduction to Allure Spa.
2. Lines 44-72 contains a section class called "sidebar," which contains an unordered list class called "menu," and within this class, there are list items with 5 sections.
3. The sidebar menu will be accessed through the hamburger menu created from lines 21-26.
4. Lines 75-162 are all going to include html code for the About Us Section.
5. Directly underneath the section class "about-us", we have a div which contains the section heading named "About Us," followed by the underlining placed right below the header.
6. At line 80, we created a div class which contains 6 services within this div.
7. Each of the 6 div class created on lines 81, 93, 106, 118, 132, 146 within the "services" div each will consist of a service header class, along with an icon (<i>) to represent each service in a visual manner.
8. Each service will contain an h3 header as the title and a <p class named "service-text" which will contain all the descriptions of said services.
9. Lines 157-159 in html file will contain a div class named "about-us-img-wrapper" which can be accessed through the images folder through the root directory.
10. Researched some useful fonts top utilize when it comes to building a Beauty Salon Website, and which will fit the business the best, and we chose 'Gruppo,' 'Urbanist,' and 'Noto Serif Display.' All utilized throughout the CSS file.
11. When the sidebar gets opened, lines 16-33 in CSS file ensure that the hamburger menu moves with it, thats what the ".change" portion takes care of.
12. Also when the side bar opens, the hamburger menu turns into an X with a 'close' span so that the user may close it once its not needed. This is implemented by lines 35-55.
13. Lines 73-87 will ensure that the 'close' span is visible/invisible when opening or closing the sidebar.
14. Lines 100-125 is taking care of the backbround image. This portion sets the image to the entire oage with our desired likings and in addition, sets an animation so that the image moves to scale as the page is reloaded.
15. Lines 127-180 will take care of the banners on the home page. This portion will set the fonts, size, etc. In additon, an animation was implemented so that the banners slide up when the page is reloaded.

16. Lines 196-226 will take care of the menu items styles. This portion will also set a hover effect on the services and there will be a change to a cursor as well when hovering over the services.
17. Lines 229-250 will be the styles design for the social media icons. This will also have a before hover effect set when you glide the cursor over the icons.
18. The About Us CSS was built using the grid positions to place the services in our desired placements. Here we had also set the size for the headers and the service text classes (279-337).
19. The Javascript file will contain an event listener for clicks when the user clicks on the hamburger menu on the top left of the website. It will check on the container and will do the action that is specified on the "change" class.
20. Lines 165-208 focus on the team section listing each person's name, specialty and a little description about them. In the CSS file block `".card:hover .card-info"` allows for this description to be visible when the mouse hovers over the pic.
21. Lines 209-250 are for the Book Us section, line 238 allows us to open a drop down menu and lists the different service options.
22. Lines 252-575 are for our contact us section. With the help of two div's we were able to break half of the block to have an image background and the other half to hold a form.
23. In the CSS file for the contact block `"background: linear-gradient(rgba 15 15 0.4, rgba 22 22 22 0.5), url(images/contact-bg.jpg); center no-repeat;"` allowed me to put the image as a background for the left side of this block and make it opaque.
24. Lines 278-288 specify the footer section, where we were able to add the facebook, instagram and twitter icons.
